Softwired releases iBus//Mobile 2.0 – a major advance in high-performance Wireless Data infrastructure software solutions

Softwired sets the standard for application-to-application Wireless Data messaging with today's general availability of iBus//Mobile 2.0. The new release of the award-winning Java product brings enhancements in areas critical for the successful implementation of wireless solutions: Security, Scalability and Flexibility.

"This new release of iBus//Mobile marks a significant step in the evolution of this innovative product" reports Daniel Keller, Director of Engineering at Softwired. "Development of this version has been driven totally by the needs of the Wireless Data market: Security, Scalability and Flexibility being the key issues addressed, together with the closer integration of the iBus//Mobile gateway software itself with existing service provider infrastructures".

iBus//Mobile 2.0 is the enabling infrastructure middleware for Wireless Data solutions such as the recently-announced "Hayabooza Wireless Java Platform for Interactive Portals". Part of Softwired's iBus end-to-end JMS (Java Message Service) messaging middleware solution, iBus//Mobile is a pure JMS implementation for mobile devices. This unique standards-based approach, coupled with the product's full feature set, is rapidly being recognised as the standard, key to realising solutions in

more

an environment where fast time-to-market and a rapid ROI are essential. With in-built support for 2.5G and 3G carrier technologies, iBus//Mobile can deliver on the needs of service providers and telecommunications-focused companies looking for the foundation of their next-generation services.

Version 2.0 includes features such as:

- Javaphone support: MIDP, J2ME and J2SE
- Security support via SSL or Certicom
- JMS messaging across multiple bearers including TCP, UDP, HTTP, GPRS, UMTS, SMS, WAP and others
- Seamless SMS control center integration
- GUI Administration console for simple administration
