Softwired announce World's First Highly Available JMS - iBus//MessageServer addresses commercial messaging needs

New High Availability features in Softwired's iBus//MessageServer high-performance JMS messaging server provide the only true 24x7 messaging infrastructure for critical messaging solutions.

To be previewed at next week's JavaOne show in San Fransisco, the enhancements introduce a new level of High Availability functionality to the already rich feature set of this high-performance product. Many large corporations rely on iBus//MessageServer for highly reliable, secure and high-performance messaging, as witnessed by this week's announcement regarding dit (Deutsche Investment-Trust). Such solutions, and those required by wireless data services, depend on the underlying messaging infrastructure to provide an uninterrupted "backbone" in the true sense of the word. Softwired iBus//MessageServer addresses not only issues of scalability but also reliability – keeping businesses in business.

Mike Wilson, Director of Product Management at Softwired: "Early in computing history networks were considered cost centers not critical to a business' success or failure. With the increasing

more

adoption of Internet and wireless Internet solutions, 'Highly Available' computing networks are a crucial factor in the running and servicing of business needs. In fact, the business and telecommunications sectors consider a 24x7 'Highly Available' network as being the differentiator used to gain an advantage over competitors. iBus//MessageServer is the only truly 'Highly Available' 24x7 service for all business critical data transmissions."

iBus//MessageServer belongs to the iBus product solution family from Softwired. Softwired's e2e (end-to-end) platform comprises a set of 100% Java Message Service (JMS) product solutions which combine to provide a complete end-to-end messaging infrastructure capable of supporting high throughput, totally reliable and highly scalable e-business and m-business application solutions.

Softwired can be found at booth #523 in the JavaOne Pavilion between 3rd and 7th June 2001.

About Softwired
