**SOFTWIRED AND JBOSS PARTNER TO DELIVER WIRELESS JAVA MESSAGE SERVICE FOR MOBILE ENTERPRISE APPLICATIONS**

*Softwired, Industry's Leader in Standards-Based Mobile Messaging Technology Now Integrates with JBoss, Industry's Most Downloaded Java Open Source Application Server*

**ATLANTA and ZURICH, Switzerland—May 19, 2003**—JBoss Group LLC, provider of the most popular Java-based application server, and Softwired today announced that Softwired has joined the JBoss Preferred Affiliates™ Program. Softwired is the leading provider of mobile application messaging software based on Wireless Java Message Service (WJMS™). Softwired's iBus//Mobile solution, which is part of the iBus™ product range, enables enterprises to "go mobile" by connecting existing enterprise applications to new generation mobile devices.

Softwired's iBus//Mobile is the only true end-to-end wireless solution based on the JMS API. iBus//Mobile enables developers to build, deploy and manage mobile applications quickly irrespective of network coverage. iBus//Mobile adheres to wireless standards, is both device and bearer agnostic and connects to both Java (JMS) and .NET technologies. iBus//Mobile guarantees message delivery even in unreliable mobile environments and now also integrates with leading Java application server JBoss®.

Companies worldwide use the open source JBoss application server, which is freely available for corporations to download, in development and demanding deployment environments. Together, iBus//Mobile and JBossMQ for JMS messaging allow developers to quickly and cost-effectively integrate and deploy mobile enterprise applications using the industry's leading Java technologies.

"JBoss is gaining acceptance by more and more developers who recognize that it is a mature, competitive and proven open source server," said Henry Wild, CEO of Softwired. "The compelling combination of iBus//Mobile with JBoss provides customers with increased functionality and interoperability to extend flexible and secure web services and enterprise applications to the mobile world at an affordable price."

“We are extremely delighted to welcome Softwired to our Preferred Affiliate Program,” said Marc Fleury, founder of JBoss.org and president of JBoss Group. “Softwired’s iBus//Mobile is the industry’s leading, proven standards-based mobile solution, and combined with the JBoss application server offers our many enterprise customers the ability to extend their applications and business model into the mobile world using proven standards.”

JBoss 3.0 fully supports the J2EE 1.3 standard. It includes the basic EJB container and JMX infrastructure; JBossMQ for JMS messaging; JBossMX for mail; JBossTX for JTA/JTS transactions; JBossSX for JAAS based security; JBossCX for JCA connectivity; and JBossCMP for CMP persistence.

### **About Softwired**

Softwired AG, based in Zurich, Switzerland is the leading supplier of award winning highly scalable JMS technology for Intranet, Extranet and Internet and end-to-end wireless/embedded solutions. Customers and Partners include such leading organizations as Sun, Siemens, Vodafone, eBay, the US Air Force [DoD], Lockheed Martin, Dresdner Bank, Northrop Grumman, Korean Tobacco & Ginseng and other leading global enterprises. For more information see [www.softwired-inc.com](http://www.softwired-inc.com).

### **About JBoss Group**

JBoss is an open source, standards-compliant, Java-based application server implemented in Java. With more than 250,000 downloads per month, JBoss is the most downloaded Java-based application server in the industry. JBoss can be embedded in commercial products and is being used in production around the world. JBoss Group LLC is an Atlanta-based professional services company, created by Marc Fleury, founder and lead developer of the JBoss application server. JBoss Group brings together core JBoss developers to provide services such as training, support, consulting and documentation, as well as management of the JBoss software affiliates program. These commercial activities subsidize the development of the free JBoss server. For more information please see [www.jboss.org](http://www.jboss.org).
