## **Softwired's latest iBus//MessageServer 4.1 offers new features and outstanding levels of performance**

**Softwired raises the performance bar with the release of its new JMS server products. With version 4.1 the Swiss software company proves that performance and ease of use are not mutually exclusive.**

"Softwired proves yet again that it is the pacemaker in the application-to-application messaging market with the release of version 4.1. Both the iBus//MessageServer Standard and Business 4.1 come with a graphical user interface (GUI) that makes installation, configuration and administration a piece of cake," says Martin Erzberger, Director of Engineering. Additional features include an administrative API, JDBC interface for Oracle databases, hierarchical topics, optimization of web enabled HTTP Tunneling and SSL and much more. At the same time performance and stability of both products have been significantly increased. According to client test results Softwired's JMS server products are industry's only servers that can handle large amounts of messages reliably over extended periods of time.

more

Through an exacting process of Beta testing at a number of customer sites, both server products were proven to be totally reliable. According to Tom Geer, Chief Architect at Codexa Inc., an Internet Information Provider for professional investors: "The 4.1 release of iBus//MessageServer has now raised the bar for pure Java JMS implementations. Our server runs for weeks on end reliably delivering hundreds of thousands of messages a day. The ease of administration and a secured hierarchical name service make iBus//MessageServer a clear leader." This is the confirmation that Softwired, the JMS technology leader, has once again delivered a product to market that in reliability, performance, handling and ease of use is second to none.

For ASPs, and any large web commerce user, the Business version of iBus//MessageServer provides an optimized HTTP Tunneling, for even more powerful application-to-application communication through the Internet. A newly introduced JDBC interface enables persistent message store to an Oracle database, which provides further optimization for high end users.

#### **About Softwired**

Softwired, based in Zurich, Switzerland is the leading supplier of highly scalable JMS technology for Intranets, ExtraNets and Internet and end-to-end wireless/embedded solutions. Customers include such leading organizations as ebay, UBS, US Air Force, CMGI Solutions, Xerox Corporation, Swissair, Northrop Grumman, LivePerson and many others.

Softwired is a privately held and venture capital funded
