Softwired delivers Critical Messages in Internet Time for Codexa

Information for Professional Investment and Trading delivered in Real-Time with iBus

Professionals in the finance market need all the help they can get to catch trends and respond quickly to market shifts. This need is not at all academic; their success depends on it. Codexa, founded by some of the most experienced people in the world of finance, is strategically positioned to deliver information relevant to trading and making investment decisions in the Internet era.

And what technology do they rely on to connect information sources within their organization and deliver it to their clients? The answer is iBus//MessageServer. The best reasons for choosing a particular software solution, one key to strategic needs, come from users: "We have just gone live with iBus//MessageServer, reinforcing our already strong opinion that Softwired's iBus software is the right choice for us." says Thomas Geer, Chief Architect of Codexa Corporation based in California. "The extensive testing we did during the evaluation phase showed the performance of iBus//MessageServer under prolonged stress was simply unbeatable. Other products failed to work or just could not keep up with iBus."

more

Codexa has to have true scalability, reliability and the highest levels of performance for their leading-edge distributed Toolkit used for summarizing internet information and delivering concise reports. Geer added: "The fundamental consideration was the need to have a full featured, scalable and robust JMS implementation, one compliant with J2EE 2.0. From there our decision was based on software quality. We also needed a company we could rely on. The support provided by Softwired during the development phase, and now into production has been unparalleled, ensuring quick time to market while keeping our development costs down."

"As Codexa expand their use of JMS, iBus will grow with them." Says Martin Erzberger, Director of Engineering at Softwired. "The features of the iBus//MessageServer such as HTTP tunneling, browser-friendly, compact client library, support of XML data types, 128bit SSL encryption and selectable Quality of Service are all there for the application developer to create web-based e-commerce applications."

Because iBus solutions are 100% Java, they run on any Java Virtual Machine (JVM) from the smallest configuration to the mighty Intel® Itanium™ processors. Not only does iBus//MessageServer have the features that Codexa need, but it comes with the support you would expect from a Swiss quality high-tech software company.

And for the future; Codexa can rely on iBus to get them onto those millions of mobile users with the iBus//Mobile, the perfect JMS solution for both current users and those "Java-enabled" devices about to come on the market.

About Softwired

Softwired, based in Zurich, Switzerland is the leading supplier of highly scalable JMS technology for Intranet, Extranet and Internet and end-to-end wireless/embedded solutions. Customers include such leading organizations as UBS, the US Air Force, CMGI Solutions, Xerox Corporation, Swissair, Northrup Grumman and LivePerson. iBus is used in a wide variety of applications from financial trading, telecommunications systems management, document distribution to the management of customer support sessions. Softwired is a privately held, venture capital funded company which can be contacted at: info@softwired-inc.com, +41 1 445 23 70 or on the web at: <http://www.softwired-inc.com>.

About Codexa

Founded in March 1999, Codexa Corporation, an Information and Application Service Provider, has developed an Internet infrastructure solution to help professional investors cope effectively with the avalanche of available financial information. The system uses autonomous software agents to gather and aggregate raw data. It then utilizes artificial intelligence to filter, parse and prioritize information to match clients' selection criteria. Codexa is based in Pasadena, California. For further information, visit <http://www.codexa.com>.
